

ParaView: An Introduction

The ParaView source code and documentation can be obtained via the ParaView website (paraview.org) on the download page:

<http://www.paraview.org/download/>

In addition to containing Source code (as well as Binary installers), multiple datasets, along with a tutorial, are available too. To access these, under "Type of Download", select:

"Data, Documentation, and Tutorials"

Then under "File to Download", select:

ParaViewData-v5.1.0.tar.gz or ParaViewData-v5.1.0.zip

ParaViewTutorial.pdf

The tutorial uses two of the datasets in the example collection. (Others in the collection can be used to experiment).

The end of the tutorial shows some methods of using Python from within ParaView.
