

Welcome to Supernova (NTU)!

A Supernova is a powerful and luminous stellar explosion. We are Supernova!

Inaugurated in 1991, Nanyang Technological University (NTU) has grown to become a comprehensive and research-intensive university. Our university is consistently ranked as one of the top universities in Asia. In NTU, the High-Performance Computing Center (HPCC) provides HPC resources to the entire NTU research community.

In SC2020 VSCC, our team is a truly diverse team. We have a mix of nationalities in the team, reflecting the diversity of NTU. The six members also have various backgrounds in computer science and mathematical sciences. One interesting fact about us is that we didn't know others before. We found our Professor with the same passion and we formed an interesting team. We are enthusiastic computer science students who are willing to work together to solve challenging problems.

During the training period, we have worked hard together to prepare for the competition. We have a clear teamwork allocation and organized competition plan to allow for frequent discussions and make sure we reach our goals. We consulted domain experts from academia as well as the industry to gain a deep understanding of the theoretical knowledge and common practices.

In the free time, some of us usually play games, play sports, and watch YouTube videos. If we would pick a theme song, we would choose Believer by Imagine Dragons.

Participating in SC2020, we expect to enrich our knowledge and experience in the High-Performance Computing field, compete and interact with regional and international friends, as well as win prizes and contribute to make NTU shine.

We are looking forward to experiencing a memorable competition!

Supernova team,
Nanyang Technological University, Singapore (GMT+8).
